

AEROFLEX® HF

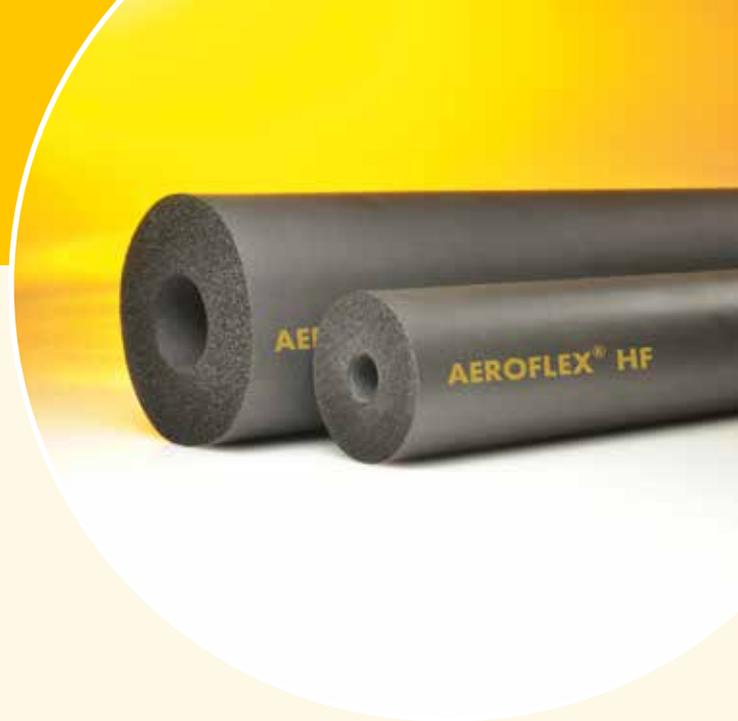

AEROFLEX® HF - the halogen free insulation material for highest safety requirements.

A special feature of the halogen free insulation material is the reaction to fire. High flexibility, UV resistance and a wide temperature range are the basic characteristics of all AEROFLEX® insulation material.

Insulation material

- Light-weight, flexible closed cell insulation made of EPDM
- Non-corrosiveness to copper and corrugated stainless steel pipes (according to DIN 1988, Part 7)
- Excellent thermal insulation values:
 λ 40°C = 0,040 W/mK
- Temperature resistance from -50 °C up to 150 °C

Application

AEROFLEX® HF is used to insulate and protect pipe lines, containers and air ducts, especially in the shipbuilding and electronic industry (where due to safety reasons the importance lays on chlorine-free material).
